

William West

Columbia, SC | wwest0708@gmail.com | 803-840-0708
github.com/WilliamWest223 | linkedin.com/in/william-west | williamwest223.github.io

Computer science student at the University of South Carolina building AI agents and the full-stack systems they run on — autonomous MCP pipelines, self-hosted local LLMs, and shipped client work. Seeking a Summer 2027 software engineering internship.

EDUCATION

University of South Carolina

B.S. Computer Science

Columbia, SC

Expected May 2028

Relevant coursework: Software Engineering, Advanced Programming Techniques (C++), Algorithmic Design II (Data Structures), Programming in a UNIX/Linux Environment, Digital Logic Design, Introduction to Computer Security

EXPERIENCE

Freelance Web Developer — Lewis Lawn Care

Jul 2026

Contract · Columbia, SC

- Designed and shipped a Next.js 15 marketing and booking site for a local lawn-care client as sole developer, from landing page through admin dashboard.
- Built an instant-quote calculator and booking flow with server-side availability checks that reject double-bookings.

PROJECTS

Jarvis — Autonomous Study Agent — Autonomous academic tracking pipeline

Apr 2026 – Present

Personal project · github.com/WilliamWest223/jarvis-study-agent · Python · Playwright · Notion API · Model Context Protocol · Chrome automation · cron

- Built an autonomous agent as a Model Context Protocol skill that runs unattended nightly, reading the university LMS and syncing new assignments for five courses into Notion.
- Beat Shibboleth SSO — which blocks headless scrapers — by driving a live authenticated Chrome session over MCP and querying the gradebook API in-page; the agent never handles credentials.

Local-First Notes-to-Video Engine — On-device generative media pipeline

2025 – 2026

Personal project · github.com/WilliamWest223/notes-to-video · Python · FastAPI · Ollama / Llama 3.1 · Stable Diffusion · XTTS v2 · MoviePy

- Built a four-stage FastAPI pipeline that turns raw study notes into a narrated, captioned 1080p video — organizing notes, scripting scenes, rendering imagery, narrating, and assembling.
- Ran the entire generative stack on-device — Llama 3.1 (Ollama), Stable Diffusion 2.1, and XTTS v2 neural TTS — with zero cloud API calls, so notes never leave the machine.

Interview Prep MM ("Method Men") — Technical interview preparation platform

Feb 2026 – Apr 2026

CSCE 247 Software Engineering — 5-person team · Java · JavaFX · JUnit 5 · Maven · JSON persistence · Figma · Git

- Authored the core domain model for an 11,800-line Java platform built by five developers — User, Player, Contributor, Question, Section, and a generic Votable interface.
- Implemented daily-question rotation, bookmarking, streak tracking, and role-based admin moderation across a 14-branch feature-branch workflow.

TECHNICAL SKILLS

Languages: Java, C++, Python, TypeScript, JavaScript, SQL, HTML/CSS, Bash

AI Engineering: Anthropic & OpenAI APIs, Model Context Protocol (MCP), Local LLMs (Ollama / Llama 3.1), Prompt engineering, LLM red-teaming & prompt injection, Web-app penetration testing, RAG & TF-IDF pipelines

Frameworks & Libraries: React, Next.js (App Router), React Native / Expo, JavaFX, Node.js / Express, Tailwind CSS, Vite

Data & Infrastructure: PostgreSQL, Supabase (Row Level Security), SQLite, Prisma, Vercel, GitHub Pages

Testing & Quality: JUnit 5, Vitest, Playwright, ESLint, SonarLint

Practices & Tools: Git branching workflows, GitHub Issues & PR review, UML modeling, Design patterns (Singleton, Facade, State), Agile / Scrum, Maven, Figma, Requirements elicitation
