Computer Science student at the University of South Carolina building team-scale Java systems and full-stack web applications. Seeking a Summer 2027 software engineering internship.

EDUCATION

University of South Carolina

Columbia, SC

B.S. Computer Science

Expected May 2028

Relevant coursework: Software Engineering, Advanced Programming Techniques (C++), Algorithmic Design II (Data Structures), Programming in a UNIX/Linux Environment, Digital Logic Design, Introduction to Computer Security, Algorithmic Design I (Java)

EXPERIENCE

Freelance Web Developer — Lewis Lawn Care

Jul 2026

Contract · Columbia, SC

- Designed and shipped a Next.js 15 marketing and booking site for a local lawn-care client as sole developer, from landing page through admin dashboard.
- Built an instant-quote calculator and booking flow with server-side availability checks that reject double-bookings.
- Abstracted the storage layer so Postgres can replace the JSON store without touching route handlers.

PROJECTS

Interview Prep MM ("Method Men") — Technical interview preparation platform

Feb 2026 – Apr 2026

CSCSE 247 Software Engineering — 5-person team · Java · JavaFX · JUnit 5 · Maven · JSON persistence · Figma · Git

- Authored the core domain model for an 11,800-line Java platform built by five developers — User, Player, Contributor, Question, Section, and a generic Votable interface.
- Implemented daily-question rotation, bookmarking, streak tracking, and role-based admin moderation across a 14-branch feature-branch workflow.
- Wrote JUnit suites for the singleton list managers within a 300-test suite, surfacing three confirmed source defects filed as GitHub Issues.

Party Town — Cross-platform campus social platform

Apr 2026

Personal project — sole developer · TypeScript · Next.js 16 · React 19 · React Native (Expo) · Supabase · PostgreSQL · Tailwind CSS v4 · Vitest

- Built a 9,500-line TypeScript monorepo shipping a Next.js 16 web app and an Expo React Native client on one shared Supabase Postgres backend.
- Designed the schema and enforced student, venue, and admin tiers through Postgres Row Level Security policies.
- Wrote a chaos-test suite against the security boundary and generated shared types from the DB schema to keep both clients aligned.

Blackboard-to-Notion Assignment Agent — Autonomous academic tracking pipeline

Apr 2026 – Present

Personal project · Python · Playwright · Notion API · Model Context Protocol · Chrome automation · cron

- Built an autonomous agent that scrapes the university LMS nightly and syncs assignments for five courses into Notion, unattended on a 3:00 AM schedule.
- Defeated Shibboleth SSO — which blocks headless scraping — by driving a live authenticated Chrome session over Model Context Protocol and querying the gradebook API in page context.
- Added failure handling that texts the operator on expired sessions, with a hard guard against automated credential entry.

TECHNICAL SKILLS

Languages: Java, C++, Python, TypeScript, JavaScript, SQL, HTML/CSS, Bash

Frameworks & Libraries: React, Next.js (App Router), React Native / Expo, JavaFX, Node.js / Express, Tailwind CSS, Vite

Testing & Quality: JUnit 5, Vitest, Playwright, ESLint, SonarLint

Data & Infrastructure: PostgreSQL, Supabase (Row Level Security), SQLite, Prisma, Vercel, GitHub Pages

Practices & Tools: Git branching workflows, GitHub Issues & PR review, UML modeling, Design patterns (Singleton, Facade, State), Agile / Scrum, Maven, Figma, Requirements elicitation
